Additional Information on Significant Features

- **Two-Stage Variable-Rate Multi-Leaf Springs**—on rear suspension provide an excellent ride under light loads, as well as strong support capability under heavy loads. Two different spring rates are utilized: at stage one, the springs support a light load, like a few passengers. At stage two, the springs compress to the second stage, by-passing the first to support heavier loads.
- **Anti-Chip Coating**—on lower body surfaces, helps prevent damage from stone chips. This resilient coating is flexible, and absorbs the impact of stones or debris to protect the paint from chipping.
- Blazer offers standard **4-Wheel Anti-Lock Brakes**, which reduce the chance of wheel lockup helping driver maintain control during severe braking. When wheel sensors detect an impending lockup, the control unit modulates brake pressure to the appropriate brake lines, helping to improve steering control even on slippery surfaces.
